

Plant is a future tree

People who brought water and planted seedlings have been honored by people through the whole history. By spring, everyone will be eager to cultivate a piece of land. It is a good tradition to plant different trees and flower seedlings in national khashar, especially on the eve of Navruz.

On March 31, 2019 under the supervision of Vice-rector for Scientific works and Innovations T.Sultanov, the head of the department of Commercialization of Scientific-Innovative Works M.Sarimsakov, the scientific researchers N.Shaymanov, O.Abdisamatov, G.G'oziev, J.Do'stov, the doctor of sciences I.Orazbaev, Sh.Mardiev, assistant of the department IM of the faculty of HM, E.Malikov and 10 students actively participated in planting activities organized at the Scientific Research Center of TIAME.

Seedlings of fruit trees are planted on a 4-3-meter-long scheme, which is sown on low-yielding species. Growing seeds and cultivating good quality, they grow well and produce plenty of fruit for many years.

In addition to providing incredible support to our researchers, our scientists have placed a great deal of dedication to engaging young people in the field of science, giving them real knowledge. Confucius, a great scholar of the Orient, also said, "If you want to feed your people for one year, plant wheat. If you want to feed for ten years, plant a tree. If for centuries, plant knowledge and wisdom".

When a person is satisfied with his work and his family, he occupies a worthwhile place in society. May this happiness never leave our thankfulness, and new successes in our noble deeds and scientific researches for the prosperity and development of our country!

Report by N.Shaymanov, the director of the sector in the department of Commercialization of Scientific-Innovative works
