

Loyalty to the country is true loyalty

The teacher is as creative as a gardener. Just as the people enjoy the fruits of the gardener's hard work, so the master digs wells with a needle, and the product he gives to the heart, teaching science and life lessons, serves the development of the country and the well-being of the people. Associate professor Yusupov Giyos Usmonovich, Candidate of Geological and Mineralogical Sciences is one of the selfless people who has trained several students during his many years of work. The enthusiasm of the 80-year-old teacher can be described as today's enthusiasm.

Yusupov Giyos Usmanovich always tried to lighten people's burdens and do them the best he could. He always valued the scholars and encouraged his disciples to do the same. He taught young people to be honest and sincere in the pursuit of knowledge without envying anyone and without complaining about success. We students always have a high sense of responsibility to be worthy of it. The faculty team, members of the department "Hydrology and Hydrogeology" sincerely congratulate our teacher on the occasion of his 80th birthday.
