

The next demonstrative lesson

On April 2, 2019 at 8:30 in the room 612 T.Bayzakov, an associate professor of the department "Electrotechnologies and using electrical equipments", conducted a demonstrative lesson on topic "High and extremely high pressured lamps" on subject "Light-technics and electrotechnology".

In the demonstrative lesson, the most widely used electric lighting lamps, such as the types and operating principles of high and super-high pressure bulbs, connection diagrams, basic classifications, used in technological processes of agriculture and water management, modern teaching technologies and original lamps example, visual aids and computer techniques were used. It is also important to note that the theme of the lesson, the plan, the objective, and the material were all reflected in the handouts .
