

The shrines of Samarkand

Students of the 306th group of the Hydromelioration Department of the "Water supply engineering systems" direction of education together with the curator of the group, associate professor of the Hydromelioration Systems Operation Department Abdukadirova Malohat organized a trip to Samarkand.

Samarkand, which has nearly 3,000 years of history, has become richer and more beautiful over the years of independence. Wherever you look, you will see artistic creations. In particular, archaeological and historical monuments preserved in the region and revered by our people for centuries have been revived.

The students noted that a deep study and mastery of the rich cultural heritage of our ancestors is an important factor in spiritual development. We are proud to be descendants of a people with a rich spiritual heritage.
