

## The role of youth in education, science and industry

From the first years of independence, our country has been focused on educating a healthy and harmoniously developed generation, creating the necessary conditions and opportunities for training competitive personnel in the modern labor market.

The first-year students of the 5313200-TTTEM direction of the faculty of ESAWR of our institute got acquainted with the educational laboratories of the department "Electrical Engineering and Mechatronics" under the guidance of group leaders A. Mustafakulov, E. Sobirov and A. Pardaev. Such opportunities created during the study will be helpful in their future profession and to find a place in life, thus to make a worthy contribution to the development of the country.
