

The only way to stop the spread of the COVID-19 in Uzbekistan

Today in the auditorium of the Faculty of Land Management, B. Eshniyozov, head doctor of the institute's medical department, informed teachers and students about the British strain of the COVID-19 virus. Faculty Dean Sh. Narbayev, Deputy Dean for Youth Affairs H. Eshova and a group of trainers attended. The British strain of genetically modified, very rapidly spreading COVID-19 virus has become more widespread, especially among young people. What can be done to prevent its spread? The only and only correct way to prevent the new strain from spreading is to isolate the infected patient and keep a watchful eye on those who come into contact with them. It is true that the epidemiological situation in Uzbekistan is currently stable. However, this does not mean that the risk of the spread of coronavirus infection has been completely eliminated. As mentioned above, the only way to defeat COVID-19 B.1.1.7 is to comply with quarantine regulations. Quarantine restrictions are being gradually lifted in our country.
