

Our research results are on the world science scene

World Sustainable Energy Days (WSED) 2020 World Energy Congress held on March 4-6 in Wels, Austria. Scientific seminars, a conference of young scientists, exhibitions on "Green Energy" organized within the framework of the Congress. In addition, visits made to large Austrian industrial enterprises, including solar panels, inverters, electric car manufacturers and others.

It is noteworthy that at this Congress, which attended by more than 600 participants from more than 50 countries, professors and teachers of the department "Power supply and renewable energy sources" of our Institute, not only in our country but in the entire Central Asian region. D. Kadyrov and O. Tursunov participated in a research paper titled "Application of Laser Biotechnology for Biomass for BioEnergy Production through Thermo Chemical Technologies". They began with their lectures on the history of the institute, the educational-methodical and research activities currently underway, and the plans for the future to enter the top 800 universities in the world.

During the lecture the conference participants were fully informed about the research methods, results and conclusions presented in the scientific article, and the audience received answers to their questions. Scientists of our institute participated with posters reflecting their scientific work at the Green Energy Exhibition, organized as part of the three-day Congress.
