

Methods of forming professional competence in future engineers in the process of teaching physics.

Z.F. Beknazarova, a senior lecturer at TIAME, is working on the practical application of the results of her scientific research on the topic "Methods of forming professional competence in future engineers in the process of teaching physics."

On October 12, 2021, a lecture was organized for students of the group 108 of the Faculty of Hydrotechnical construction using the project method to increase the professional competence of future engineers in the process of teaching physics. The students of the group took an active part in the lesson. Each student independently searched for a solution to the problem posed by the teacher, using the skills of a step-by-step solution.
