

Training on the use of the modern Leica Sprinter 250M

✘ From year to year, modern software is developing. This contributes to the development of each sector. In recent years, a new type of high-definition digital levels has been widely used. This has created a lot of convenience for professionals in this area. Different from traditional levels, digital levels are equipped with electronics and customized special applications. This will allow automation of field measurements.

On December 10-11 was organized a course under "Sustainable Water Resources Management in Rural Areas of the Republic of Uzbekistan" program for all staff of irrigation system and professors of our institute. The course is dedicated to the use of modern digital levels (Leica Sprinter 250M) at the initiative of Head of the project "Capacity Building" Ulugbek Islamov, Malika Ikramova and Dean of the Faculty of "Hydromelioration" Alisher Fatkhulloev.

During this two-day course, "Leica" company member Rajeev Nayak explained how to use digital capabilities and apply the opportunities available. On the second day of the course, the trainees learned how to use the level practically. They were convinced that using modern digital levels is convenient, accurate in measurement, and saves time. At the end of the course, the participants were given certificates by Ulugbek Islamov and the rector of the institute for successful completion.
