

Independent study and innovation

As a result of the gradual transition of higher education institutions to the credit-module system, students began to study in the 5 + 1 system. That means, five days they have theoretical knowledge in the classroom, and the rest of the week they consolidate their knowledge in the leading enterprises and organizations of the industry in order to gain practical knowledge. In this regard, the students of the group 108 of the Faculty of Hydromelioration, "Innovative technologies in water management and their use" visited the enterprise "AGRO DRIP".

During the visit, the students got acquainted with the process of designing, construction and commissioning of drip and sprinkler irrigation components. The head of the enterprise Yusupov Azimjon presented the latest innovative irrigation equipment to the students. Accompanied by the group coach, the students also visited the showroom of AGRO DRIP and received answers to their questions.

Information of the group coach Daulet Gulyamov
