

Precautions against gas poisoning

On October 15 of the current year was held a roundtable discussion with students in the 2nd hall of the Faculty of Land Management. Mirkhalikova Zulfiya Kuchkarovna, a teacher of the "Life Safety" department, and Khadjaev Aliakbar took part in it with their reports. As winter approaches, industrial gas poisoning and even deaths are on the rise in various parts of the country. The expert gave the students the necessary information on what gas is, how to avoid it, and what precautions should be taken in homes on the eve of winter. These include heating the building with a gas stove and drying clothes on it, as well as preventing the stove from being left unattended. He also said that gas leaks could not be checked by open flames, such as matches.

During the event, students were shown a video on measures to prevent carbon monoxide poisoning, and expert answered their questions. Speakers also provided students with detailed information on the need to enter into a lease agreement with the landlord, the rules of living in the lease, and the need to keep in touch with the neighborhood and precinct supervisor on the location of the lease.
