

Agricultural machinery service

The use of the most advanced equipment and technologies in agriculture of our country leads to yield increase in agricultural products. Certainly, Taking into account the cost of modern technology, it requires long-term, maximum use. One of the main solutions to this is the need for timely maintenance of modern equipment by specialists, accurate knowledge of the necessary equipment settings, as well as the use of specific installations and technological processes.

On May 15, 2021, in Kashkadarya region, a republican seminar was organized by the Uzbek-American joint venture "UzKeysservice" with the participation of farmers. The teaching staff of the institute took part in the seminar within the framework of cooperation between the institute and the enterprise "UzKeysservice". They exchange views on the maintenance, the use of modern agricultural machinery, the necessary adjustments in the equipment.
