

## master's student gave a speech on the international scientific conference

On June 16 this year, a seminar of the Scientific Seminary of the Department of Housing and Environmental Development was held at the Cracow University of Technology. It was attended by an international member of the Council, Professor Obid Tursunov and his student Karimov Islam, a first-year master's student of the Department of Electricity and Renewable Energy at our institute.

Our graduate student Karimov Islam took part in this scientific council in halakaro mikiese with a presentation titled "Heating and cooling green buildings via solar and geothermal technologies" (heating and cooling green buildings using solar and geothermal technologies). It is gratifying that the participation of Master's student TIAME with a lecture at a high-level international scientific council seminar was a historic event for the institute.

After our master's student finished his lecture, the members of the Academic Council discussed the report behind closed doors and gave him a good evaluation, and the institute's master's student was invited to support his further scientific activities by the international scientific council.
