

At TIAME, the first bachelor in the country was awarded an electronic diploma with a QR code V № 00000001.

The online event, which started at 11:00 am on July 17, was moderated by R. Choriev, Vice-Rector for Youth Affairs.

It is only natural that the completion of certain stages of education and the successful passing of final exams give the impression that a mountain has fallen from the shoulders. Graduation night is even more important. The sleepless nights of relentless research, information resource centers, reading in libraries, and passing successful midterm, current, and final examinations seem to be forgotten for a moment. In fact, it is a preparation for a new phase of trust in the teachers and hopeful parents. As our academic poet Ghafur Ghulam said, "Know that the homeland is waiting for you."

The motherland, which has created all the conditions for education and training, is ready to fulfill its duty to the government and the head of state. Now, instead of asking what the country has given me, I have to feel responsible for what I have given to my country. The goal is for someone who prefers to continue their education at a higher level, while others choose to pursue a career in their field. There is no doubt that undergraduate and graduate graduates today will be sealed for a lifetime in their lives.

The importance and relevance of our industry and profession can be seen in the Decree of the President of the Republic of Uzbekistan "On approval of the Concept of development of water resources of the Republic of Uzbekistan for 2020-2030." The decree, which consists of 11 items, emphasizes that in recent years, consistent reforms have been carried out in the field of efficient use of land and water resources, improvement of water management systems, modernization and development of water facilities. It is no secret that the need to carry out work has been expressed in detail. According to the situation, due to the pandemic situation, the online event "Graduate 2020" held at the Tashkent Institute of Irrigation and Agricultural Mechanization Engineers was dominated by the same high mood.
