

Drug abuse is a global problem of the century

Analyses suggest that drug abuse triggers a high nervous system and destroys a person's mental and physical health. In addition, the metabolism of the body breaks down, and eventually the whole body is poisoned. If a person does not consume these substances, he or she will be partially or completely dismissed. In the lecture hall of the Faculty of Land Resources for the purpose of protecting students from such a wound, students and professors from amongst the "struggle against the spread of drug use among young people" and in order to improve the effectiveness of preventive interventions among social and enlightenment environments "Drug addiction - the plague of the century, protecting our youth from it" was held.

Captain Sh. Abdullayev, a prominent representative of the FMC of the Mirzo-Ulugbek district of Tashkent, talked about the government documents on combating drug trafficking and drug trafficking and the prevention of drug trafficking. Preventing such situations is one of the main tasks of the State Security Service, internal affairs, customs and border troops. Nevertheless, the fight against drug addiction should be a direct challenge not only for law enforcement agencies, but also for the general public. In other words, we have to save our home, our children, and our loved ones from the "white dread".
