

A new training practice has begun at the plant

In our country, consistent measures are being taken to develop agricultural machinery, increase the volume and expand the range of finished products, as well as provide the population with locally produced equipment.

At the same time, there is no cooperation system between local manufacturers of agricultural machinery, a high share of imports in manufactured machinery, a stable system for the technical support of the agricultural sector and technical maintenance of machines, and the lack of a connection between science and production. All this requires special attention to this area.

In accordance with the resolution of the President of the Republic of Uzbekistan #4410 dated July 31, 2019 "On measures for the accelerated development of agricultural engineering, government support to the agricultural sector agricultural machinery", the Tashkent Institute of Irrigation and Agricultural Mechanization Engineers carries out a number of practical tasks. On September 18, 2019 at the plant, in the newly created branch, the first training and practical classes for students of the faculty of agricultural mechanization were held.
