

## Research and problem solving

On September 15-16, 2021 a group of "Hydraulics and Hydroinformatics" Department members carried out construction work and reconstruction of irrigation and reclamation facilities in Jizzakh and Syrdarya regions, in order to reliably provide irrigated land plots with water, widely introduce water-saving irrigation technologies, improve the land reclamation condition, widely introduce innovations in science and apply advanced teaching methods.

During the visit, issues of reconstruction of trough networks in the makhallas "Mirzachul", "Abay", "Yangidala" and "Pakhtazor" of the Mirzachul district of the Jizzakh region were discussed; Rashidovsky district.

A conversation was held with the engineer on technical supervision of the state unitary enterprise "Jizzakuvkurilishinvest" Z. Akromov and with engineers "Turon", who are working on the reconstruction of tray networks in the Mirzachul region, about the problems that arise during construction work. Consultations were given on the scientific and technical solution of existing problems.
