

Clean up your planet

Our planet is a very fragile creature, but at the same time it is very strong and robust. After all, for how many years - our earth lives, exists, and people live on it, breed and multiply. And there are more and more people. But with them the planet, unfortunately, is not becoming cleaner, it remains the same, if not worse. It will be even more beautiful if we are not indifferent to cleanliness and order. In this regard, April 17, 2021, under the leadership of the faculty held the Day of Ecology and Cleanliness. They made a small contribution to the cleanliness of our planet.
