

How are maps created?

In order to connect the practical training of students with the latest achievements of science and technology, to adapt the educational process to production activities, the teacher of the Department of Geodesy and Geoinformatics Zhuraev Abdulla with 3rd year students of the 1st group of the faculty of Land management based on the schedule for organizing "mobile classes" in the subject "Design and mapping of nature" visited the State Unitary Enterprise "Geoinformkadastr".

During the study trip, students learned about how to create maps, got acquainted with the conditions for employees. The purpose of the study tour is to directly connect the students' theoretical knowledge with practice and improve their skills. The students' visit to the State Unitary Enterprise "Geoinformkadastr", organized to consolidate the theoretical knowledge gained during the classes, as well as further integration of science and production, made a great impression on students. On behalf of the faculty of the institute, they expressed gratitude to all the employees of Geoinformkadastr.
