

Theoretical knowledge is in practice

On February 25, 2020, students of the faculty "Mechanization of Hydromeliorative Works" with department "Occupational Safety and Health" visited the Institute of Civil Protection of the Ministry of Emergency Situations to strengthen their theoretical knowledge. The staff of ICP divided into 3 subgroups of students and each group had separate sessions. The following illustration shows excerpts from each subgroup on first aid training.

Small groups visited the museum; organized by the Institute, and acquainted with the exhibits available at the Institute. Students improved their acting skills in first aid. The lessons in Civil Defense were interesting and memorable to the students.
