

## Do not leave anyone without attention

Each period is distinguished by its problems. International cooperation and solidarity, solidarity and common goals play an important role in eliminating them. In today's globalization, one of the most pressing problems facing the world is the state of water resources and their rational use.

On May 21, the UN Conference on Water Supply in 2019 has a world-wide theme presentation entitled "No one is to be left alone".

The organizers of the event are the UNESCO office in Uzbekistan, the Ministry of Water Resources of the Republic of Uzbekistan and the Water Policy, Water Resources Management and Environmental Protection under the UNESCO TIAME.

The opening ceremony was opened by the rector of the institute, professor O'.Umurzakov. UN Resident Coordinator in Uzbekistan Helen Fraser, Head of UNESCO Representative Office in Uzbekistan Fuad Pashayev, Deputy Minister of Water Resources of the Republic of Uzbekistan Ravshan Mamutov addressed the event. Representatives of representative offices of foreign countries and leading experts of the authoritative organizations also participated in the event.

Speaking at the opening speech, the rector said: "Today, water is a major determinant of socio-economic, social and cultural development of the community and, in particular, that it is directly related to Central Asia, the world's water-related processes deteriorate every day regretfully recording it. It is well known that the increasingly moderate use of water is closely linked with the global climate change, which in turn creates a problem of water scarcity and scarcity.

According to official data, around 2.4 billion people in the world do not have a sanitary condition in demand for water use. More than 1 billion people are deprived of safe drinking water. This, in turn, contributes to 250 million people, of which 5 million are in danger of death. It is sad to say that 20% of the irrigated land is salty.

This global event is aimed at reaching the main conclusions drawn from the World Water Report on March 19, 2019, officially ratified by the Human Rights Advisory Council at the Nations' Palace in Geneva.

This document is the foremost document of the United Nations on the status of water resources. This extensive document provides information on the general state of the fresh water resources, their use and management.

The report on the United Nations Water Resources Status is a comprehensive review and provides a general overview of the state of water resources, their management and use. The report focuses on the decision-makers responsible for the development and implementation of sustainable water resources policy in water resources every year.

This year's report points out that various water use problems address recommendations to help people achieve safe drinking water and sanitation, and ultimately achieve sustainable development (Agenda 2030) .

In this regard, improving water management, securing access to safe drinking water and sanitation, preventing poverty in the world, creating a peaceful and prosperous society, and avoiding anyone's attention on this path are the key to sustainable development.
