

Informative and supportive master class

With the aim of ensuring the high-quality practice in geodesy and familiarizing students with advanced techniques and technologies, "Master class" was held in cooperation with the Republican Center for Geodesy. During the master class, students were introduced with aerial vehicles, electronic taximeters and GNSS satellite receivers. The participated students received an understanding and ideas about the practical application of the theoretical knowledge, which was gained during their studies, for which they thanked the head of the department of geodesy and topography of the Republican center of aerial geodesy -Mirodil Kenjaboev.

Based on the information of teachers, department "Geodesy and Geoinformatics" S. Abdurakhmanov and A. Dzhuraev.
