

The future of water in Central Asia

The most pressing problems facing humanity today are the issues of water resources conservation, rational use and protection. Assistant of the department "Hydraulics and Hydro informatics" D.Sh.Allayarov and S.U.Djonkobilov with student of the first course and the Research Institute organized discussion on the theme "Future of Water in Central Asia".

Professor V.A. Dukhovny's presentation for young scientists, researchers and students heard and the presenters' views on the past, present and future of water management in the region presented to the audience. During the roundtable discussion, students learned about the current state of the water industry ,how we should use existing water resources in the future.
