

Water management – the demand of the century

Water is an invaluable treasure. Effective use of it is an extremely important issue. Especially, how well the future water management specialists will understand, and how well they are aware, will determine the future of our country's water management.

For this purpose, on the initiatives of the teachers of the department of Irrigation and Melioration, including associate professors B.Matyakubov, A.Mamatliyev and J.Ishchanov, a round talk named “Water saving: Foreign technologies in Uzbekistan” was organized. The event was attended by pedagogue A.Hayitova and 3-4 year students of the faculty of Hydromelioration”.

The representative of ‘NAANDANJAIN’ company J. Matyakubov was invited. J. Matyakubov provided information about the company and its activities in Uzbekistan through the presentation slides and video clips. Students have applied for cooperation. In the future, students explained that the company had the opportunity to be an expert in the company, so that students should get a good education, and have good knowledge of foreign language and information technology.

Interesting information and ideas were of great interest to students. The event was full of questions and answers. The meeting made a great impression on all participants.

R.Jumaniyozov, the press secretary of the institute
