

Logical thinking is a requirement of current time

Undeniably, the development of thinking, imagination, perception of being, as well as cognitive thinking, especially, in young people is of great importance. Students warmly welcome the essence of the subject of professional psychology, psychological relationships between people, psychological conditions between teams, as well as creative thinking, professional competence, emotional hands-on exercises in changing situations.

Surprisingly, the hands-on sessions are based on a variety of teaching techniques such as group work, lessons, debates and round table discussions, which further enhance students' independent and creative thinking skills.
