

Intellectual sports competitions

Under the guidance of Adkham Mamataliev, associate professor of the Irrigation and Land Reclamation Department, chess and checkers competitions were organized among students of the 402nd group of the "Water Management and Land Reclamation" education direction. Almost all students of the group took part in the competition. This shows that today's young people are very interested in this sport. The event gave the students an opportunity to spend their free time in a meaningful way and demonstrate their abilities and talent

Chess and checkers require a high intellectual potential as well as physical and spiritual maturity and intelligence. This sport has long been revered as an integral part of the cultural life of our ancestors. With an aim to widely promote chess among the population and transform it into a mass sport in the country, to create the necessary conditions for the intellectual and cultural development of the younger generation, the Resolution of the President of the Republic of Uzbekistan "On measures for further development and popularization of chess and improvement of chess players training system" was adopted on 14 January 2021. Chess is as important for mental development as physical training. It is an interesting and easy way to develop individual qualities and train the mind.
