

## The Role of Renewable Energy in Building

On May 22 this year, VIII International Conference Arch-Eco was organized by the initiative of the Cracow University of Technology (Poland) through the Zoom online platform. It is noteworthy that under the leadership of the professor Tursunov Obid Bobokulovich from the department "Power Supply and Renewable Energy Sources", Professor Oun Seok Kim, first-year master students Samandar Nabiev, Ravshan Turdaliev, Ruzimurod Erkinov, Jamshid Khudoynazarov and second-year master student Nurislom Abduganiev were attended the conference.

Speeches delivered by professors O.B. Tursunov and O.S. Kim as keynote speakers at the opening part of the conference show that the attention to professors and teachers of our institute is growing in the international arena. In addition, presentations made by our institute's master students in the conference section "The Role of Renewable Energy in Building - a Green Civil Engineering" moderated by Professor O. B. Tursunov, aroused great interest among the participants. In conclusion, it should be noted that this international conference served as an excellent school for our young researchers in their future research.
