

Innovative demonstrative lesson

If a person does not light his path through the light of science, he will remain on the street of darkness and ignorance. The light of the heart is energetic with knowledge and enlightenment. It is far, debt, and art, as well as art. Sharing knowledge with others is reward and reward! On April 25, 2019 a lesson was organized for the 107th group of "Hydromelioration" faculty under the leadership of Zamira Beknazarova, Senior Lecturer of Physics and Chemistry Department "Physics". The essentially organized open lesson was "Electromagnetic Induction Incidents". At the beginning of the lesson, the group of students was in the full-sized study room. In order to repeat the topic and to enter a new topic, the students were given "BLIS QUESTIONS". After that, students of the group were divided into three smaller groups, with the following four contingencies:

1. Introduce the team and explain the team name;
2. Making comments by the team leaders on a new topic;
3. To solve interesting science-related crossword puzzles;
4. Respond to the "BLIS QUESTIONS" on the fan surface.

The knowledge of science is endless, its ways to learn, to learn and to teach it. The main purpose of the teacher's choice of community-based instruction was to enhance students' interest in science, to train them in teamwork and, most importantly, to strive for win-win and confidence. Each team that had been active during the training session received RAG'BAT cards. Upon termination of the Terms, the teacher summarized the topic and gave the final conclusions. The role of physics in the development of society in the history of science, as well as the innovations and discoveries can be made in science today. The demonstrative lesson was delivered by the head of the Department of Physics and Chemistry Yorqin Toshmurodov and associate professor Bakhtiyor Kadyrov. In the near future, the observers voiced their positive feedback to the non-traditional approach and innovative approaches used by the teachers and wished the students success in their future work. We also thank our students for the excellent teacher who has prepared this lesson!
