

Science Olympiad is an important scientific contest

Our president Sh.M.Mirziyoev is convinced that all his meetings should be considered as a topical issue in the development of all-round and well-educated specialists in the Republic. The Science Olympiads also have their place in the training of such personnel. Taking into consideration this, the teachers of the department "Theoretical and Construction Mechanics" teach students with the dedication of the subjects taught in the department. Students of our institute participate in annual Olympiads in the Republic and contribute to the growth of our institution's reputation. Before the Republican Olympiad in May, teachers of the department are preparing additional syllabuses for the students, who have been trained by them, and the first stage of the Olympiad on "Theoretical Mechanics" and "Resistance of Materials" are doing. On March 25-26, at the Department of "Theoretical and Construction Mechanics" of the Tashkent Medical Academy the first stage of the Olympiad on "Resistance to Materials" was held.

Head of the department M.Mirsaidov
