

"Innovation" Group

In recent years, the word "innovation" has become more common in the media, electronic and print media. What is innovation? When did the term appear? The concept of "innovation" first appeared in scientific research in the XIX century. The term "innovation" is derived from the Latin word "novatio", which means "renewal", "change", and the suffix "in" means "in the direction" when translated from Latin. If we translate it as a whole "Innovatio" - it is interpreted as "in the direction of change."

Students of the group 307 of "Innovative technologies and their exploitation in water management" of "Hydromelioration" faculty led by internship leader Nodir Gadoev during the internship in the "Scientific-educational center" of our institute in Orta Chirchik district of Tashkent region, using innovative water-saving technologies in the allotted area. In particular, they designed drip irrigation systems, installing the distribution pipes and irrigation hoses on the crop field by themselves. The enthusiasm of the students during the installation process clearly demonstrates their interest in their field.

As our President says: "Our most important task is to create an innovative environment in the worldview of our people. Without innovation, there will be no competition, no development in any field. If we do not widely promote the changes in this area to our people, if we do not develop skills in people, we will not be able to keep pace with the intensity of today's times, the unprecedented achievements of science and technology! " We need to constantly support change and innovation.
