

In turn opening lesson

☒ On March 27, 2013, at 08:30, at the room №612 there was held a open lesson on the theme "Power factor and methods of its development" from the subject "Fundamentals of Energy Efficiency" by the head of the department "Using electrotechnology and electrical equipment" A. Berdishev. After the completion of the students' register, the topic of the lecture was introduced, and before the introduction of the main part of the lecture, the exercises were partially explained by question and misunderstanding. Students took part in the lesson 100%. Using the computer technique (Power Point, Core Drive, and other programs), the students were fluent in Uzbek on the subject. The lecture was held in the form of question-and-answer interaction with students interactively. In the introductory part attention was paid to the work carried out in our country and the decision of the President to this sector. The theme was covered in connection with operational problems. Depending on the seasonality of production, agriculture has been delivered to students who have their own characteristics.
