

The energy ...

At the present stage of development, this happens through the satisfaction of energy demand, the modernization and reconstruction of existing power plants and networks, the construction of new production facilities based on high-energy production technologies, the improvement of energy metering and the development of renewable energy sources. Diversification of fuel and energy resources is the main task of the electric power industry. By 2021, it is planned to implement 52 investment projects in all areas of energy development.

The power industry of the republic is rightfully considered one of the main sectors of the economy of Uzbekistan. It has significant industrial and scientific-technical potential, contributing to economic development and human well-being. On this occasion, the 14th International Exhibition UzEnergyExpo-2019 was held on October 23-25 at the Uzexpo center. The exhibition is attended by local and international organizations in sectors such as energy, energy, renewable energy, energy saving, electrical equipment, lighting equipment and technologies, cables, similar products and fittings.

Among them were students of group 409 (EE) of the department "Electricity and Renewable Energy", headed by group coach A.K.Davirov participated in this exhibition. The exhibition was very informative, and our students received the necessary information. Our students showed great interest in the exhibitions of the International Organization for Renewable Energy, which attracted all electric vehicles. Our students received enough information from this exhibition.

Information by Alisher Davirov, Assistant of the Department of Electricity and Renewable Energy

Press Secretary of the institute Rakhimboy Djumaniyazov.
