

HUAWEI representatives held a master class on the use of data centers

The representatives of HUAWEI conducted a seminar for the staff of the Educational and Methodological Department, the Department of Information Technology, the Center for Information Technology, the Information Resource Center and the Department of International Cooperation at the Tashkent Institute of Irrigation and Agricultural Mechanization Engineers.

The seminar was conducted through a zoom program by Nikita Malikov, HUAWEI Representative in Russian Federation.

First, let's start with a brief history of the company.

Today, not every industry in the world can be imagined without information technology. These include smart agriculture, smart cities, global financial institutions, oil companies, safe cities, and so on. For this, super servers may assist us.

There was given a detailed information about such servers and their features, including the placement of data on a server hosted by HUAWEI on our institute, automatic storage of current data in case of emergencies (power outages or Internet outages), intelligent functions and other conveniences.

Information from the head of the international cooperation department Sh. Rakhmonov
