

"The 1st International Conference on Energy, Civil and Agricultural Engineering 2020" has started.

We all know that the further improvement of the living standards of the population is directly related to the development of sectors of the economy, including energy, construction, and agriculture. The role of scientific conferences in finding scientific solutions to the problems and issues that arise in these areas around the world and in our country and are still unresolved is invaluable.

The 1st International Conference on Energy, Civil and Agricultural Engineering 2020, scheduled for October 14-16, 2020 in cooperation with the Tashkent Institute of Irrigation and Agricultural Mechanization Engineers and the Krakow University of Technology in Poland and the Karabuk University in Turkey, has started its work.

Despite the current global pandemic, research in the field of science has not slowed down even for a moment. On the contrary, during this period, the mutual integration of theory and practice has intensified, and the number of scientific studies has increased significantly. The conference alone received more than 230 high-level scientific articles reflecting the scientific and practical work of international and domestic scientists in the field of energy, construction, and agriculture, of which 170 were selected. This is evidenced by the fact that it comes from more than 20 countries, including Germany, Poland, Singapore, Malaysia, Turkey, Nigeria, Brazil, Croatia, Iraq, Peru, Cyprus, Russia, Kazakhstan, Uzbekistan, India, Afghanistan, Bangladesh, and Pakistan.

The conference was opened by the Rector of TIIAME, Chairman of the Republican Council for Higher Education O.Umurzakov, Vice-Rector of Krakow University of Technology Dariuzs Bogdal, Vice-Rector of Karabuk University Mustafa Yasharlar and Deputy Minister of Higher and Secondary Special Education U.Begimkulov, Deputy Minister of Innovative Development A.Nazarov, Minister of Water Resources. A. Mirzaev congratulated the participants of the international conference.

The main purpose of this international event is to jointly study and exchange views on modern advanced technologies and scientific findings, which are currently being implemented in important areas of any country, such as energy, construction and agriculture. It also unites foreign and domestic scientists, doctoral students and researchers working in these fields.
