

Efficiency of industrial practice

From June 22 to August 1, 2020, in accordance with the curriculum and order of the rector of the institute, 3-year students of the Faculty of Agricultural Mechanization undergo practical training. During the practice, students improve their knowledge and skills, get acquainted with the process of harvesting grain and technical means. This week, students will get acquainted with the working process of the "Rostselmash" combine harvesters by "Vector-410" and the "Claas Dominator-370" combine harvesters, which are produced at the UzKlaassagro plant, as well as the operation of the MTZ-80 tractors and the PLN-3 plow, which are used in the fields to prevent fires during harvest.
