

The report reflect results

Recognition and review of the achievements and shortcomings of the year means evaluation. From the same point of view, the speech of our esteemed rector, Professor Uktam Pardaevich Umurzakov on the report for 2020 - problems, tasks and plans for the future, deserve special attention.

At the beginning of his speech, the rector of our institute wished to have a fruitful and prosperous new year ahead, noting that today's meeting will be a working meeting, not a festive event. This time, the meeting was also attended by employees of the Bukhara and Karshi branches of the institute, via Zoom platform.

On the basis of President's Address to the Oliy Majlis, the rector of our institute commented on the efforts of the President to resolve key issues of the country's development, in particular the education system.

Important views were mentioned on the essence of the President's decisions in strengthening the education system.

In the Year of Youth Support and Health Promotion, the challenges are greater and tasks are more demanding. Most important priorities are high-quality upbringing and education of the younger generation, the gradual modernization of the educational process, and the increase in teachers' salaries.

Analyzing the activities, the rector characterized the educational, scientific, spiritual, financial and economic process, in his speech. It was pointed out that significant work has been done on educational and methodological work, which is one and a half times more than in previous years. An example shows that in this academic year, 1,915 students were accepted for regular full-time studies and 795 students for part-time learning. This requires the teaching staff to be more responsible for their work. It is important that, despite the pandemic, the education system did not stop, the distance education process, the submission of video lectures was carried out rapidly. In addition, the basic requirements of the credit module system are directly related to this. It is impossible to ignore the fact that there are some shortcomings in paying attention to the quality of education. When the staff of the Department of Quality Control of Education analyzed 108 trainings, it became obvious that the results were not satisfactory. "In any case," he said, "I remain committed to the principles of quality, fairness and transparency."

The names of the departments that created the literature were listed. It is true that the 5 + 1 program is successful and produces the expected results.

Then the rector focused on research.

In 2020, 17 fundamental and practical projects funded by the Ministry of Innovation of Uzbekistan were completed. It was stressed that this pace should be continued this year as well. There are still some disadvantages in this regard. It is gratifying that the articles of the professors and teachers of the Institute have been published in foreign journals. But still this is not enough, the rector noted that some scientists stopped their "scientific machine".

It is appropriate to hold spiritual and educational events and to publicize them in the media. Talking about the tasks that still need to be done in the field of education, the rector noted that we should treat students as our own children.

Then the rector spoke about the work done in the field of finance and economics. He has noted that a lot of work has been done to improve the material and technical basis of the institute.

While the strengths and weaknesses reflect our work, the numbers and analysis, undoubtedly facilitate to draw the right conclusions.

As a result, the team felt the need to contribute to the development of the prestige of the institute and education system by their profession, mission, abilities and talents.
